SANITIZING TUNNELS

With the Threat of COVID 19 pandemic rising everyday, social distancing and self sanitizing are some major ways to fight this deadly virus. Sanitation sounds easy with a basic level hand wash or spray, but this deadly virus looms on more than hands, it infects and stays on our clothes too. Things we rarely think to sanitize. That's where our top of the line, highly efficient sanitizing tunnels save the day.
WHAT IS IT?

The tunnel creates an obligatory passage and is equipped with, internal arc-shaped atomizing nozzles that saturate the environment but preventing dispersions. The nebulization system is connected to a control system capable of automatically mixing the sanitizing product at percentages indicated by the manufacturer. Access to the tunnel is regulated by a traffic light with motion detection. By placing a barrier floor inside the Sanitary Gate, it is possible to sanitize the surface in contact with the ground.
HOW IT WORKS

The eco-friendly disinfectant liquid is combined with water to create a fog with an adjustable weight so that it will cover the maximum surface area of any object or person and can be customized to meet your specific and unique needs.

About The Disinfectant Liquid

- Kills 99.995% of bacteria, viruses, fungi and spores
- Non-toxic disinfectant & deodorizer
- Free of alcohol, aldehydes, dyes & scents, non-staining
- Hypoallergenic & non-irritant
- pH neutral
- Cost & time effective with no evacuation necessary & immediate disinfection

In Accordance to

EN 1276
EN 13697
EN 14476
WHERE CAN IT BE USED?

Sanitary Tunnel represents a safe protection for everyone, in particular for those who work in close contact with groups and are therefore at higher risk. It can be installed at the entrance of **public offices, pharmacies, supermarkets, airports, hospitals, ports, stations**. It is suitable for all **private companies** who need to hygienise the **workforce, goods, vehicles and material**, Government office sanitization through gate use. Even **residential buildings, schools, and malls** would greatly benefit in the installation of a sanitizing tunnel.
Features

Fully automatic and equipped with sensors. No need for supervision. High pressure fogging. Excellent coverage. Well spread without dead-zone.

Three Size Options

Technical Data

- Rated voltage/Frequency: AC220V/50Hz
- High Pressure Pump: Italian Origin
- Effective Range: 1m—4m (Customizable)
- Particle Size: 10 to 30µm
- Tank: 20L – 500L
- Spraying time: 1-100 min (adjustable)
- Spraying Volume: 1-10L (Customizable)
- Gate Size: Customizable
